ENVIRONMENTAL RESPONSIBILITY

# NET ZERO BY 2050

## ENVIRONMENTAL & SUSTAINABILITY

V3 is committed to operating responsibly and sustainably, recognizing our role in protecting the environment and supporting a low-carbon future. Environmental considerations are embedded into our business strategy, decision-making, and daily operations.

We embrace the commitment to achieve net zero carbon emissions by 2050, and we are on track to meet this goal. V3 has developed its own carbon calculator to accurately measure and monitor emissions across our operations. Where emissions cannot yet be eliminated, we offset our impact through initiatives such as annual tree planting and work with a company called Karma to achieve this.

V3 actively promotes waste reduction and circular economy practices. Within our IPS workshop, we operate a specialist machine that condenses leftover material into pellets.

These pellets are reused as fuel and distributed to local businesses and care homes in the local area, where they are ideally suited for log burners. By converting waste into usable fuel on-site, this process eliminates the need for weekly skip deliveries to the workshop, reducing waste transport, vehicle emissions, and landfill use.

As part of our net zero strategy, V3 has committed to transitioning to electric vehicles, significantly reducing transport-related emissions.

We comply with all applicable environmental legislation and regularly review this policy to ensure continual improvement and alignment with our sustainability objectives.
